## Chicago Bird Alliance Birds of The Greater Chicago Area A Seasonal Checklist

This checklist contains 328 species of birds that have been reported in the greater Chicago area since 1970. An additional 82 species, listed on the back page, have also been known to occur since 1970, but are not normally expected to be seen.

For the purpose of this checklist, the "Greater Chicago" area includes:

- Illinois: Cook, DuPage, Grundy, Kane, Kendall, Lake, McHenry and Will  
Indiana: Lake County

The checklist has been divided into six seasons to denote the differences between early and late migration periods.

Note that our dates are approximate and weather dependent.

- Wi - Winter: 1 December to 28  
ES - Early Spring: 1 March to 20 April  
LS - Late Spring: 21 April to 10 June  
Su - Summer: 11 June to 20 August  
EF - Early Fall: 21 August to 30  
LF - Late Fall: 1 October to 30 November

Seasonal abundance is defined by the following terms:

- A - Abundant: Certain to be found in good numbers in several habitats  
C - Common: Certain to be found in good numbers in suitable habitat  
F - Fairly Common: Likely to be found in small numbers in suitable habitat  
U - Uncommon: Possible to be found in small numbers in suitable habitat  
R - Rare: Unlikely to be found even in suitable habitat  
O - Occasional: 1-5 birds found in most years  
a - Accidental: 1-5 birds found in some years

Other notations included are:

- \* - nesting: known to nest *regularly* in the area  
° - nesting: has nested in the area, but not regularly  
L - local: occurs only or more commonly in certain areas  
V - variable: varies in presence and numbers from year to year

This checklist has been compiled by Alan Anderson, Richard Biss, David B. Johnson, Joe Lill, Walter Marcisz, Jeffrey Sanders, Alan Stokie, Douglas F. Stotz and David Willard. (In memoriam: William DeBaets and Homer Eshbaugh)

The names and order used are those of the 7th edition of the A.O.U. Checklist and supplements.
